ABSTRACT

An object of the present invention is to provide a conversation support apparatus and a conversation support method that allow users to effectively and smoothly converse with each other. According to the present invention, since a first display section 22 and a second display section 32 can be placed at different angles, while a first user is watching the second display section 32 and a second user is watching the first display section 22, they can smoothly converse with each other. Since the first display section 22 and the second display section 32 are disposed, for example the second user and the first user can face-to-face converse with each other.
